

Together against Covid-19 Pandemic

Company interested in cooperation: Mediagnost GmbH

Contact Person (Name and Position): Dr. Angelika Haage, CEO

What can we offer: anti-SARS-CoV-2 IgG Antibody ELISA:

The **Mediagnost Anti-SARS-CoV-2 ELISA E111-IVD** is a highly specific enzyme immunoassay for the detection of IgG antibodies against the SARS-CoV-2-S1 receptor binding domain (RBD) in human blood. The test has been CE marked since May 6, 2020.

The Anti-SARS-CoV-2 ELISA is produced and sold by Mediagnost and is now available to diagnostic laboratories that have established the appropriate facilities to carry out the ELISA technique.

Mediagnost specializes in developing such ELISA systems and producing and selling these test procedures as so-called test kits: e.g. the Growth Factor detection in the field of endocrinology, Leptin detection methods in the field of obesity. In the field of infectiology, Mediagnost has 35 years of experience in the production of detection methods for antibodies against Hepatitis A-Virus or Pseudomonas aeruginosa.
