

Together against Covid-19 Pandemic

Company interested in cooperation: trenzyme GmbH

Profile: trenzyme GmbH is a privately owned German Contract Research Organization (CRO) offering a wide range of highly customized services in cell line development and recombinant protein production.

Since 2000, trenzyme has been a valued research partner of national and international clients, ranging from academia and small biotechs to big pharmaceutical companies. Our scientific experts are continuously developing new and comprehensive solutions to provide reliable, up-to-date support for the individual and demanding projects of our clients.

Whether your needs lie in the development of assay cell lines and GMP-compliant production cell lines, in recombinant protein production or in stem cell differentiation, trenzyme's team is dedicated to delivering the ideal solution for you.it]

Contact Person (Name and Position):

trenzyme GmbH, Dr. Reinhold Horlacher, Managing Director & CSO

What can we offer:

Recombinant SARS-CoV-2 Proteins

We produce recombinant SARS-CoV-2 proteins which can be used as antigen or control protein for analytic and diagnostic purposes as well as for vaccine development.

The recombinant protein of the receptor binding domain (RBD) of SARS-CoV-2 (2019-nCoV) Spike S1 from Wuhan pneumonia virus with C-terminal His-Tag can be delivered off-the-shelf: <https://www.trenzyme.com/protein-service/catalog-proteins/sars-cov-2-2019-ncov-spike-s1-protein-rbd/>

We are also working at high pressure on the production of other important proteins of nCoV-2 like Spike Proteins S1 and S2 as different variants, the Nucleocapsid Protein as well as the human ACE2: <https://www.trenzyme.com/protein-service/recombinant-sars-cov-2-proteins/>

To support COVID-19 research trenzyme offers following services:

- Delivery of SARS-CoV-2 proteins off-the-shelf
- Production of SARS-CoV-2 proteins with special features
- Development of a GMP-compliant production cell line (viral spike protein)
- Cell line development (assay cell line) for compound screening

What are we looking for:

Collaboration welcome and possible on:

- Development of cell based assays
- Development of protein based screenings
- Development of GMP-compliant production cell line (vaccine development)

We are looking for:

- Partners working on ELISA development
- Partners doing compound screens
- Partners interested in developing SARS-CoV-2 vaccine program
